A	6. Put JS at the bottom					
A	7. Avoid CSS expressions					
n/a	8. Make JS and CSS external ▾					
B	9. Reduce DNS lookups ▾					
C	10. Minify JS ▾					
A	11. Avoid redirects					
B	12. Remove duplicate scripts ▾					
A	13. Configure ETags					

[파이어버그\(firebug\)](#)에 기생(?)하는 [YSlow](#)가 몇몇 새로운 기능과 버그를 수정하여 [0.9버전으로 업데이트](#) 되었습니다. 파이어버그의 Net 패널과 더욱 긴밀하게 통합되어 DOM이 아닌 요소까지 탐지하고 iframe까지도 크롤하여 리소스를 분석한다고 합니다. 자세한 내용은 아래와 같습니다. 그나저나, [Rule 14 - Make Ajax Cacheable](#)항목이 추가되었다고 하는데, 왜 안보일까요?

## Version 0.9.2

- Detect non-DOM requests (XHRs, image beacons, etc.) by extracting from Net Panel.
- Crawl frames and iframes to find components.
- Highlight 4xx response codes in Components View.

- Display thumbnails when hover over image URLs
- Implement search within YSlow Firebug panel.
- Add "doc" and "xhr" to the list of components to check for gzip compressions.
- Bug fix: Improve detection of CSS expressions (ignore rules that contain the word "expression").
- Bug fix: Change status bar colors to work with dark Firefox themes.
- Bug fix: Do not penalize for DNS lookups if the hostname is already an IP address.
- Bug fix: Don't include components with data:, javascript:, and chrome: protocols.
- Bug fix: Better detection of JS minification for `"/* */` style comments.
- Bug fix: Display all unique filenames when more than one script file is included multiple times.
